IT_6203_Lab_2
Project_progress_tracker
Step 1

powershell

cd project-progress-tracker
ng generate component progress-notes --standalone
ng serve

terminal running in the browser: Open http://localhost:4200 in your browser.

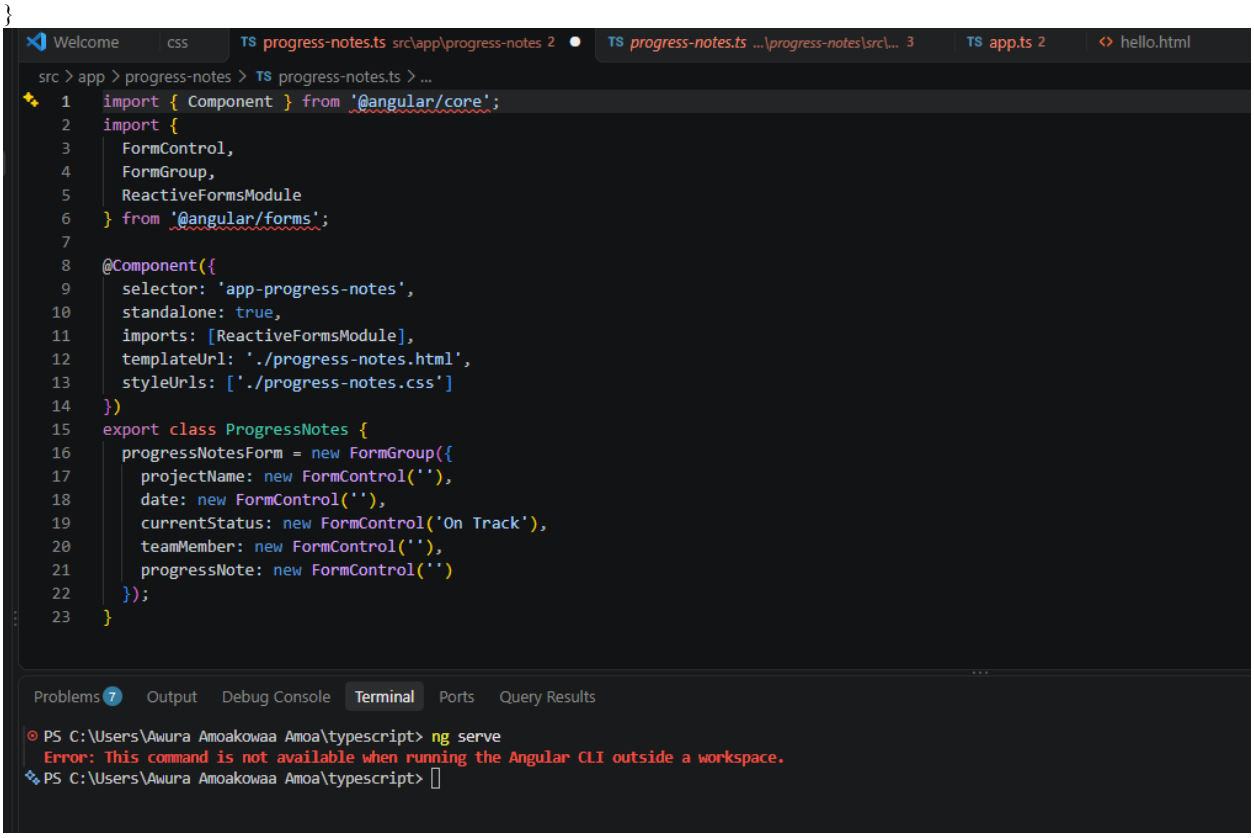

Step 2 Add a typescript model

Open src/app/progress-notes/progress-notes.ts

```
import { Component } from '@angular/core';
import {
  FormControl,
  FormGroup,
  ReactiveFormsModule
} from '@angular/forms';

@Component({
  selector: 'app-progress-notes',
  standalone: true,
  imports: [ReactiveFormsModule],
  templateUrl: './progress-notes.html',
  styleUrl: './progress-notes.css'
})
export class ProgressNotes {
  progressNotesForm = new FormGroup({
    projectName: new FormControl(''),
    date: new FormControl(''),
    currentStatus: new FormControl('On Track'),
    teamMember: new FormControl(''),
    progressNote: new FormControl('')
  });
}
```

Step 3 Connect HTML form

```
<h2>Progress Notes</h2>

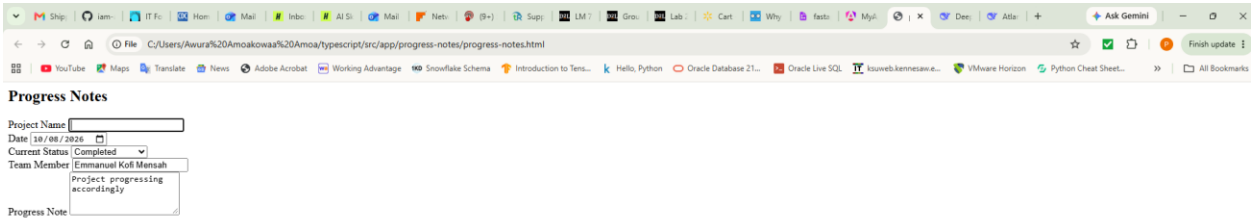

<form [formGroup]="progressNotesForm">
  <div>
    <label for="projectName">Project Name</label>
    <input id="projectName" type="text" formControlName="projectName" />
  </div>

  <div>
    <label for="date">Date</label>
    <input id="date" type="date" formControlName="date" />
  </div>

  <div>
    <label for="currentStatus">Current Status</label>
    <select id="currentStatus" formControlName="currentStatus">
      <option value="On Track">On Track</option>
      <option value="Needs Attention">Needs Attention</option>
      <option value="Completed">Completed</option>
    </select>
  </div>

  <div>
    <label for="teamMember">Team Member</label>
    <input id="teamMember" type="text" formControlName="teamMember" />
  </div>

  <div>
    <label for="progressNote">Progress Note</label>
    <textarea id="progressNote" rows="4" formControlName="progressNote"></textarea>
  </div>
</form>
```

Step 4 Display it in the app

```
import { ProgressNotes } from './progress-notes/progress-notes';

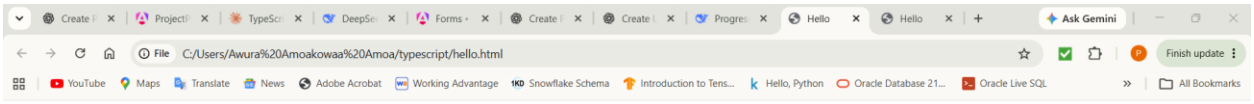

@Component({
  // ...
  imports: [/* existing imports, */ ProgressNotes],
})
```

In src/app/app.html, add this below the Milestone Tracker:

```
<app-progress-notes></app-progress-notes>
```

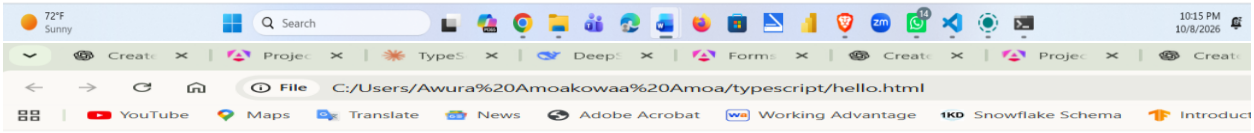

```
html<app-progress-notes></app-progress-notes>
```

Team Member Emmanuel Kofi Mensah
Progress Note Completed the project setup and started the Angular form

Summary
Module & component imports: In a standalone component, you import ReactiveFormsModule from @angular/forms and list it in the component's imports: [] array. If you leave it out, Angular can't recognize the [formGroup] binding. You get an error like ″Can't bind to 'formGroup' since it isn't a known property of 'form'", and the form doesn't work.
Form data access: The value property of the FormGroup returns every control's value as one object. In TypeScript it's this.progressNotesForm.value. In the template you can show it with {{ progressNotesForm.value | json }}.

Data validation readiness: Import Validators and pass it as the second argument to the FormControl:

typescript
import { FormControl, FormGroup, ReactiveFormsModule, Validators } from '@angular/forms';
projectName: new FormControl('', Validators.required),
